*Discovering Neurons* Carol Ann Paul 1997

Discovering Neurons is a collection of investigative laboratory experiments designed for the advanced undergraduate and the first or second year graduate student. In its three major sections, neurons are studied as: -- individual cells, including topics such as intracellular recording, immunocytochemistry, and HPLC -- forming connections, with experiments on tract tracing, information coding, and LTP, among others -- as coordinators of behavior, through approaches such as pharmacology, lesioning, and ethology. The fourth section focuses on techniques applicable to several experiments in the collection, including electrophysiology recording, surgery, anesthetics, and staining methods.

**Designing Your Own Classical Curriculum**

Laura M. Berquist 2010-09-20 Home educator Laura Berquist presents a modern curriculum

based on the time-tested philosophy of the classical Trivium-grammar, logic and rhetoric. She has given homeschoolers a valuable tool for putting together a "liberal arts" curriculum that feeds the soul, as well as the intellect. Her approach, covering grades K - 12, is detailed and practical, and it is adaptable by parents and teachers to any situation. This third revised edition includes a much expanded section for a high school curriculum, and an updated list of resources for all grades.

**Biological Investigations Lab Manual**

Warren Dolphin 2010-01-27 The lead author of eight successful previous editions has brought together a team that combined, has well over 60 years experience in offering beginning biology labs to several thousand students each year at Iowa State University. Their experience and diverse backgrounds ensure that this extensively revised edition will meet the needs of a new generation of students. Designed to be used with all majors-level general biology textbooks, the included labs are investigative, using both discovery- and hypothesis-based science methods. Students experimentally investigate topics, observe structure, use critical thinking skills to predict and test ideas, and engage in hands-on learning. Students are often asked, "what evidence do you have that..." in order to encourage them to think for themselves. By emphasizing investigative, quantitative, and comparative approaches to the topics, the authors continually emphasize how the

biological sciences are integrative, yet unique. An instructor's manual, available through McGraw-Hill Lab Central, provides detailed advice based on the authors' experience on how to prepare materials for each lab, teachings tips and lesson plans, and questions that can be used in quizzes and practical exams. This manual is an excellent choice for colleges and universities that want their students to experience the breadth of modern biology.
