Digital Documents: Systems and Principles

Peter King 2004-02-12 This volume contains the proceedings of two recent conferences in the field of electronic publishing and digital documents: - DDEP 2000, the 8th International Conference on Digital Documents and Electronic Publishing, the successor conference to the EP conference series; and - PODDP 2000, the 5th

International Workshop on the Principles of Digital Document Processing. Both conferences were held at the Technische Universität München, Munich, Germany in September 2000. DDEP 2000 was the eighth in a biennial series of international conferences organized to promote the exchange of novel ideas concerning the computer production, manipulation and dissemination of documents. This conference series has attempted to reflect the evolving nature and usage of documents by treating digital documents and electronic publishing as a broad topic covering many aspects. These aspects have included document models, document representation and document dissemination, dynamic and hyper-documents, document analysis and management, and wide-ranging applications. The papers presented at DDEP 2000 and in this volume reflect this broad view, and cover such diverse topics as hypermedia structure and design, multimedia authoring techniques and systems, document

structure inference, typography, document management and adaptation, document collections and Petri nets. All papers were refereed by an international program committee.

Management Len Asprey 2003-01-01 Portals present unique strategic challenges in the academic environment. Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite. The implementation of a portal requires a coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution. Building a portal is as much about constructing intra-campus bridges as it is about user interfaces and content. Designing Portals: Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution's business and educational strategy,

by taking the reader through the processes of conceptualization, design, and implementation of the portals (in different stages of development) at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere.

The Digital Document Bruce Duyshart 2013-02-01 Documents, such as drawings, memos and specifications, form an essential function in the design and construction industry. Throughout the lifecycle of a built asset, starting from an initial design idea, right through to a final built form and its ongoing management, thousands, even millions of documents can be used to convey various forms of information to a range of interested parties. In many ways, therefore, the success of a design, or

construction-based company, relies upon an understanding of the use of documents, as well as the technologies and techniques that are used to create them. The Digital Document provides an extensive background to the issues and technologies surrounding this very important topic. It examines a technical subject in an insightful manner that is neither intimidating nor confusing, even to the novice computer user. By introducing the subject through a series of preliminary reviews of current practices and essential computing technologies, the reader is able to better appreciate the benefits and capabilities of a wide range of digital document types. This book explores the role of documents in a professional practice, examines the components, capabilities, viability, and use of digital documents in the design and construction industry, and identifies and explains many of the standards in use today. In order to facilitate a better understanding of digital document technologies, a number of essential reviews are

provided including: - the definition and purpose of a document - how documents are typically used by design professionals - the nature of the digital document environment - the data types which make up digital documents The Digital Document is an essential reference for the architect, engineer or design professional that wants to find out more about effective communication in the digital workplace. Bruce Duyshart is an IT Project Manager with Lend Lease Corporation and specialises in the development and implementation of digital media and information management technologies on design and construction projects. He holds a Masters degree in Architecture and is also an academic associate of the Faculty of Architecture, Building and Planning at the University of Melbourne. He has written numerous papers on emerging technologies in the architecture, engineering and construction industry, and has developed Internet web sites for the Royal Australian

Institute of Architects and Architecture Media.
Wilde's WWW Erik Wilde 2012-12-06 What is the difference between a URL and a URI? How does HTTP fulfill its task? Why do we need XML? What is it, and will it eventually replace HTML? This book gives answers to these questions and a chore of others that may be asked by attentive inhabitants of cyberspace. The book is, of course, not just a glossary of abbreviations and frequently used terms. It is rather a comprehensive and still succinct presentation of the technology used in the World Wide Web. It is surprising to note that, even though hundreds of books have been published that discuss the Web, there have been none, so far, to thoroughly explain the inner workings of this popular Internet application, which is so simple to use and yet so complex when it comes to really understand what is going on inside. The target audience of this book is perhaps best described by how it was first used by the author himself: A draft version was chosen as the supporting text

for a class of practitioners, who attended a continuing education course on WWW technology. These were people who knew what the Web is, and how it may be used for business, but needed to know how the technology works. During the planning for this course, the author found that no suitable book was on the market, and decided to write one himself.
