Advances in Web-Based Learning - ICWL 2004 Wenyin Liu 2004-12-06 With the rapid development of Web-based learning and new concepts

like virtual classrooms, virtual laboratories and virtual universities, many issues need to be addressed. On the technical side, there is a need for effective technology for deployment of Web-based education. On the learning side, the cyber mode of learning is very different from classroom-based learning. How can instructional development cope with this new style of learning? On the management side, the establishment of the cyber university - poses very different requirements for the set-up. Does industry-university partnership provide a solution to addressing the technological and management issues? Why do we need to standardize e-learning and what can we do already? As with many other new developments, more research is needed to establish the concepts and best practice for Web-based learning. ICWL 2004, the 3rd International Conference on Web-Based Learning, was held at the Tsinghua University (Beijing, China) from August 8th to 11th, 2004, as a continued attempt to address many of the above-mentioned issues. Following the great successes of ICWL 2002 (Hong Kong) and ICWL 2003 (Australia), ICWL 2004 aimed at presenting new progress in the technical, pedagogical, as well as management issues of Web-based learning. The conference featured a comprehensive program, including a tutorial session, a keynote talk, a main track for regular paper presentations, and an industrial track. We received 120 papers and accepted only 58 of them in the main track for both oral and poster presentations.

Web Programming with Go, Second Edition GitforGits 2025-10-05 This is

a new edition of "Web Programming with Go" and it's designed to help both entry-level and professional developers build and launch functional web applications using Go's core libraries. Every chapter gives you practical lessons, from setting up Go projects and building strong backend routes to frontend-backend integration, session management, authentication, concurrency, and connecting external APIs. This book is a hands-on way to learn key skills like testing, logging, error handling and performance tuning, all explained in simple, direct language. The real code and examples make it easy to understand and use the concepts. It covers nearly every major aspect of Go web development, but keeps examples straightforward and avoids complex edge cases, making it ideal for learners and practitioners who want clarity and reliable progress. You'll learn to structure projects, design backend services, manage sessions, secure authentication, and integrate external APIs with step-by-step Bookstore examples. It's got clear, practical techniques for routing, concurrency, testing, logging, performance and error handling, and it uses code that's easy to understand and explanations that are easy to follow. Basically, this book looks at modern Go features without getting into complicated or niche scenarios, making the lessons useful for real projects. This edition makes it easy for you to get from setup to deployment by focusing on simplicity over unnecessary detail. Key Features Get your web projects sorted with Go, using organised code, a modular design, and real-world workflows. You'll build, secure and test RESTful APIs using Go's net/http, Gorilla Mux and JSON best practices. Put in place user authentication, role-based access, and strong password protection to make sure your users have a safe experience. Get the front end and back end talking to each other by having clear API contracts and simple JSON data interchange practices. Use Go's concurrency tools to boost performance, scale up data fetching, and avoid deadlocks. Mock databases, APIs, and dependencies for fast, isolated, and reliable automated test routines. Set up session management, secure cookies, and resilient authentication flows to keep users logged in. Keep an eye on, log and trace application events to quickly find and fix problems. Use Go's HTTP client patterns to integrate payment gateways, external APIs,

and third-party services. Come up with easy-to-understand error messages and stick to the standard incident response plans.
