Big Java Cay S. Horstmann 2019-08-06 Big Java: Early Objects, 7th Edition focuses on the essentials of effective learning and is suitable for a two-semester introduction to programming sequence. This text requires no prior programming experience and only a modest amount of high school algebra. Objects and classes from the standard library are used where appropriate in early sections with coverage on object-oriented design starting in Chapter 8. This gradual approach allows students to use objects throughout their study of the core algorithmic topics, without teaching bad habits that must be un-learned later. The second half

covers algorithms and data structures at a level suitable for beginning students. Choosing the enhanced eText format allows students to develop their coding skills using targeted, progressive interactivities designed to integrate with the eText. All sections include built-in activities, open-ended review exercises, programming exercises, and projects to help students practice programming and build confidence. These activities go far beyond simplistic multiple-choice questions and animations. They have been designed to guide students along a learning path for mastering the complexities of programming. Students demonstrate comprehension of programming structures, then practice programming with simple steps in scaffolded settings, and finally write complete, automatically graded programs. The perpetual access VitalSource Enhanced eText, when integrated with your school's learning management system, provides the capability to monitor student progress in VitalSource SCORECenter and track grades for homework or participation. *Enhanced eText and interactive functionality available through select vendors and may require LMS integration approval for SCORECenter.

Programming with Java Julia Case Bradley 2002 Java has become one of the leading development languages today. It plays a very important role in application development for business as well as a tool for Web programming. This Java text is designed primarily for business programming students. It assumes no prior programming experience and introduces students to the object-oriented approach from the very beginning. This text can be used for a first language course or for a more advanced programming course.

Introduction to Java Programming Y. Daniel Liang 2001 For CS1 (in Java) and other introductory Java programming courses offered in Computer Science, Engineering and Business programs. Designed for a first course in Java programming, this text covers Java 2 the newest version of this programming language, principles of programming, and core Java features. A step-by-step approach first lays a sound foundation on programming elements, control statements, and methods; then introduces object-oriented programming; moves on to graphics programming; and concludes with advanced features that enable students to develop comprehensive programs. Representative examples, abundant pedagogy, and multiple exercises provide students with an outstanding introduction to Java. *NEW UML (Unified Modeling
